The new dispenser bucket

Cleaning and disinfection wipes always close at hand

NEW!

Hygienic storage and easy removal of wet wipes

The right agents must always be readily available to ensure effective surface disinfection or cleaning. The practical dispenser buckets for wet and hygiene wipes by SAIER Verpackungstechnik offer safe storage as well as maximum tightness and easy removal of wipes.

The newly-developed wipe dispenser insert can be installed in all lid shapes (round, oval or square) and lid sizes (from 1 litre to 30 litres), ex works. As such, it offers the highest flexibility in container selection for the professional storage of wipe rolls of different sizes, either for B2B or B2C applications. In addition to their filling with moist hygiene wipes, the dispenser buckets also allow the packaging of dry non-woven wipe rolls with the simultaneous filling of disinfectant. The wipe dispenser insert is easy to open, thanks to

an ergonomic finger recess, and it is securely closed by pressing a snap-on lid, ensuring that the wet wipe rolls remain moist. A cross opening in the dispenser insert guarantees simple tearing off of the wipes. The dispenser bucket is refillable and can be reused as often as required.

SAIER Verpackungstechnik containers are made of polypropylene (PP) and are 100% recyclable. Buckets can be manufactured with metal or plastic handles. We offer you In-Mould-Label (IML) ex works, both in the highest flexibility in colour design and in the decoration of buckets and lids. We are pleased to advise you on your applications in the industrial, medical, food/catering or service sectors and on the configuration of our dispenser system.

Safe and clean packaging!
